

### Statement of purpose

My name is XXXXXX and I am permanent resident of Pokhara-13, Gandaki, Nepal. If one were to ask my friends to describe me they would describe me as a very diverse, pleasant, active and intelligent person. I am that type of person who likes to travel different places, learn new cultures and experiencing new things. There have been many occasions during my life that I have spent hours sitting at hospital bedside with my sick relatives. Nurses who cared for them always drew my admiration. I feel they are handful of truly inspirational professions and Nursing is, without doubt one of them. Along with doctors and other medical staff, nurses provide an invaluable service to society and to be a part of that group has long been an ambition of mine. In addition, I was inspired by a quote "Servicing hands are better than praying lips" and hence always wanted to help other. I confidently feel ease in the profession that would give me a high degree of work satisfaction, Nursing is the greatest in comparing to other professions that is why i have choosed nursing as my career. I am confident that I possess potentiality to work in this field and can give my best.

As for my academic backgrounds, I have just finished my Post Basic Bachelor of Science in Nursing on December 2014 from Indira Gandhi National Open University securing overall 79.29% which has got Tribhuvan University Affiliation. I completed my Proficiency Certificate Level Nursing from Manipal College of Medical Sciences, Phulbari, Pokhara, Kaski on Sep 2008 with 79.95%. I cleared my SLC from Bal Vidya Mandir English Boarding school on 14 June 2005 with first division(70.75%). After getting registration in Nepal Nursing Council, I started working as a volunteer staff nurse since 23rd November 2008 in Manipal Teaching Hospital, Phulbari-11, Pokhara and was appointed as a full time registered nurse in Surgery Ward on 15th May 2009. Through these years I also got opportunity to work in Emergency department and Special Ward as well. Now I am working as a Sister-Incharge of Special ward from 2nd April 2014. Thus, this has indeed given me the invaluable practical experience and knowledge and skills to pursue my further study so I joined IELTS classes and given exam on 12 September 2015 and secured an overall score of 6.5. I am married on 5th December 2010 and I am applying single.

After having the academic qualification upto Bachelors level and work experience, I am now focused on pursuing higher studies and future career of being a qualified nurse so that I can contribute towards the better health of the people. I am applying for an admission into University Of Sunshinecoast, Australia. After consulting my friends and seniors studying in Australia, University of Sunshinecoast at Brisbane has been recommended because it is the only public University in Queensland who got five stars in teaching quality and have the highest student satisfaction rate. From your website available in the Internet, I read about its success and came to know that it has proven itself as one of the well-renowned universities in Australia.

I would be lucky and glad to be a part of its educational system. If I get chance to be a student at your University, I could gain knowledge about nursing education in a better way and I am sure that will help me a lot in my nursing career. I wish to pursue higher education on nursing which will be helpful to gain further essential and advanced technical knowledge in the field of nursing. This degree fits my academic as well as career needs very well.

Today, with the strong determination in my mind I am intending to apply for Master of Health Promotion as I felt it would be the best to complete my higher level education in Australia, where the universities provides an excellent learning environment for all students. The more I write the less it would be if I go on describing about why I choose to study in Australia but my view is that it is a great country with unique features that has been leading global education whole over the world with top 50 ranked universities in the different field like engineering, health and sciences, agriculture, arts etc. Australia is the most popular study destination for International students because of its high quality education. Australia is the country with foremost of new technology and innovations so the students can take advantage from its impressive technology and research sources. Similarly it has a high living standard with considerably lower cost of living expenses and tuition fees in comparison to other countries like UK, USA. They also have Tuition Protection Scheme (TPS) which means fees is safe and secured but this scheme is not available in UK and USA. Furthermore, Australia has Education Services for Overseas Students Act(ESOS) that protects the rights of International students studying in Australia. Lastly Australia provides Post study work opportunities for International students so that they can gain an international experience.

Furthermore, I did research in different Universities of Australia before I chose University of Sunshine coast. I went through comparison of University of Adelaide, Darwin University, University of New England but among all these Universities the University of Sunshine coast attracted me more and made me feel more satisfied with my decision to pursue higher education in Australia.

University of Sunshine is the modern equipped University providing world class facilities for international students with the wide variety of courses in affordable cost. It also offers friendly and supportive campus environment, access to highly qualified teaching staffs and personal attention. The University of Sunshine coast is providing service to the students from Sippy down and Southbank. I have chosen the USC, SOUTHBANK for my intended course of Master of Health Promotion. During the entire living and studying period, I will be living nearby the University so that I can focus on my studies and there will be no loss on time in travelling.

I choose to study in Australia rather than in my own country because as we all know that Nepal is one of the developing country where health is in transition phase with lack in modern technologies and efficient manpower. Education is based on more theoretical knowledge with traditional teaching methods than practical knowledge. Students are facing many problems time to time for instance lack of quality teacher, limited seats, strikes due to political instability which hampers for regular study. Thus, in my view regular study based on practical knowledge with highly qualified professors helps to broaden our skills, ability and knowledge. Studying in Nepal will not give me the top quality depth of a profession which is so vital to the inpatient population of a hospital. I want to study in world class facility learning new and evolving things in the field of Nursing in a place such as Australia that has high quality care for its population with its excellent hospitals. Thus I choose Australia because of its excellence, multicultural diversity, high living standard, affordable tuition fees, friendly people and Qualification Recognition.

However, studying in Australia would not have been possible without the support of my family. I am very lucky to have families who have always been there for me encouraging and supporting me both emotionally and financially so that I could pursue my studies and have a bright future. During the entire duration of my stay in Australia, I will be fully funded by my family who are very supportive My Father is Ex-Indian army and my brother is in British Army.

After completion of my course, I have a dream to work in a community rural area after returning to Nepal. As Nepal is a developing country where most of the geographical part (85%) is covered by hills and mountains. Nepal's health system is in transition. Nearly half of its population is below the poverty line. In such an extreme setting of poverty, people in the rural areas of Nepal die even of the diseases like diarrhea, common respiratory infections, malnutrition etc. Inadequate health care facilities in rural areas and lack of professional skill in the person responsible to manage the available hospitals have created a problem in health care management in Nepal. Thus, I want to utilize the knowledge and skills that I will gain in Australia for the better health and upgrade the quality of life of people in Nepal. This degree will open doors of opportunities for me when back to my home country as I can work as a Social advocate, Project Manager or worker, Researcher, Academic, Consultant etc that will let me spread and share my experiences and knowledge and therefore bring a better generation of nurses.

In conclusion, I am aware that any university expects very high standards from its students. On my part, I can assure hard work, dedication and creativity. I believe that my enthusiasm devotion will enable me to meet these expectations. I am confident that you will find in me a person giving her best in all challenging environments, utilizing knowledge and resources for the health of the people.
